

MediMind-AI :

AI-Powered Multi-Agent Healthcare Companion

Prepared By:

- Anjali Ganeshrao Kawarkhe
- Third Year B.Tech.
- Mechanical Engineering Department
- Veermata Jijabai Technological Institute ,
Mumbai

Lenovo LEAP: Generative AI & Agentic Systems
Engineering Internship

Problem Statement :

Current Healthcare Challenges :

- Patients frequently miss medication doses.
- Doctor appointments are often forgotten.
- Medical reports are difficult for non-medical users to understand.
- Existing reminder apps provide static notifications with limited intelligence.
- Lack of personalized healthcare assistance.

Proposed Solution :

MediMind AI

A Multi-Agent AI Healthcare Companion that assists users by:

- Smart medication reminders
- Appointment management
- Medical report analysis
- Personalized lifestyle recommendations
- Emergency monitoring
- AI-powered health assistance

SDG Alignment :

Sustainable
Development Goal
SDG 3 – Good Health &
Well-being

Objectives:

- Improve medication adherence
- Promote preventive healthcare
- Increase healthcare accessibility
- Enhance patient well-being

Key Features :

- AI Health Coordinator
- Medication Management
- Appointment Scheduling
- Medical Report Analysis
- Lifestyle Recommendations
- Emergency Alerts
- Persistent Memory
- Google Login

Technology Stack :

Frontend :

- React
- Tailwind CSS

Backend :

- Node.js
- Express.js

AI :

- OpenAI / Google Gemini
- LangGraph (Planned)
- n8n

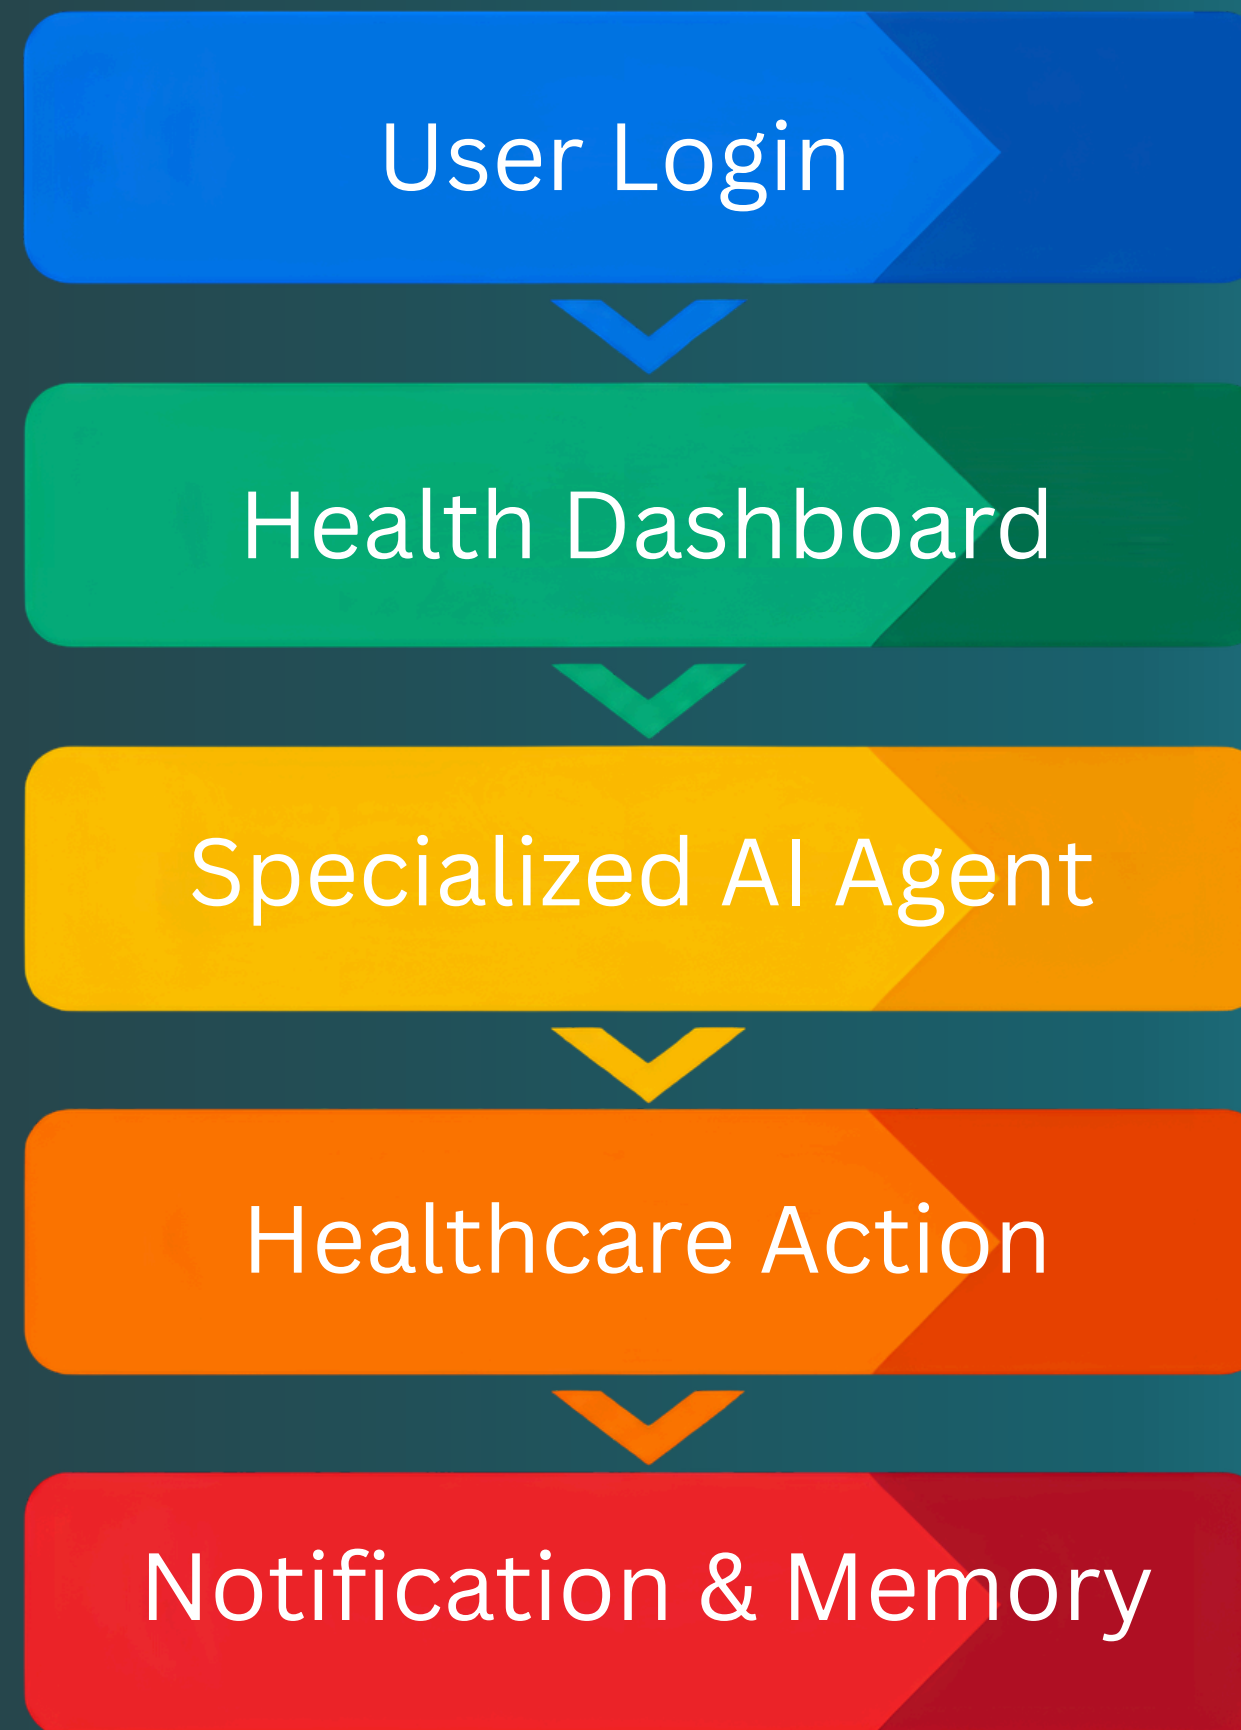

Database :

- Supabase

Authentication :

- Google OAuth

System Workflow :

Expected Outcomes :

**Improved
medication
adherence**

**Better
understanding
of medical
reports**

**Personalized
healthcare
assistance**

**Reduced
missed
appointments**

Future Scope :

Wearable
device
integration

IoT health
monitoring

Predictive
healthcare

Telemedicine
integration

Electronic
Health Records
(EHR)

Multilingual
support

Thank You
